CLIENT HANDBOOK

Command Center User Guide

A simple guide to monitoring activity, reviewing conversations, and keeping your property outreach running smoothly.

Prepared for everyday users

WELCOME

Start here

The Command Center gives you one place to see what the system is doing, review landlord conversations, and spot anything that needs attention.

1

Check progress

See replies, phone numbers, active conversations, and today's activity.

2

Review conversations

Open any lead to read the conversation and see key property details.

3

Handle warnings

Use clear status labels to find accounts or workers that need attention.

Your normal daily routine is simple: check the Dashboard, review new Leads, then look at Failed Accounts or Workers only if you see a warning.

What is inside this handbook?

01	Logging in	Page 3
02	Your daily routine	Page 4
03	Understanding the Dashboard	Page 5
04	Reviewing leads and conversations	Page 6
05	Accounts: adding and managing	Pages 7–8
06	Search profiles and locations	Pages 9–10
07	Workers, warnings, and troubleshooting	Pages 11–12

Before making changes: if you are unsure about a setting, account, proxy, or worker action, contact your administrator first.

GETTING STARTED

Logging in

The Command Center is a secure, access-controlled tool. Use the credentials provided by your administrator to sign in.

The login page. Enter your **Username** and **Password** in the fields shown, then click **Sign in**.

Use the login credentials your administrator has provided. Your username and password will be shared with you separately. Keep them confidential and do not share them with anyone else.

Protected access

Only authorised users can access the system. Sessions are private and secure.

Can't log in?

Contact your administrator to receive or reset your credentials. Do not attempt to guess a password repeatedly.

Your daily routine

Most days, you only need three sections: Dashboard, Leads, and Failed Accounts.

Using the menu

Desktop: choose a section from the menu on the left. **Mobile:** tap the menu button in the top-left, then choose a page.

AT A GLANCE

Understanding the Dashboard

The Dashboard is your overview. It answers: "Is everything working, and what needs my attention?"

The Dashboard overview — shows reply rate, phone progress, active accounts, active chats, needs-attention count, and failed accounts at a glance.

↗ Reply rate · 📞 Phone progress

Track how many landlords replied and how many phone numbers have been collected today.

👤 Active accounts · 💬 Active chats

Accounts currently running and conversations still moving forward.

Status colors

● Green means healthy

Running normally or completed successfully.

● Amber means check soon

Queued, paused, retrying, or waiting.

● Red means action needed

Login, proxy, worker, or AI error.

● Grey means inactive

Idle, stopped, or not currently running.

See a red warning? Open the related item first. If the cause is not clear, check Workers and Logs before changing any settings.

Recent activity

Use the filters above Recent Activity to quickly find — **Needs attention** (conversations with failures), **Active** (still in progress), or **With phones** (leads where a number was collected).

Reviewing leads and conversations

The Leads page is where you review landlord conversations, phone numbers, properties, and viewings.

The Leads page — lists all active conversations with status, phone number, and quick-action menu.

FIND THE RIGHT LEAD

Useful filters

- **Has phone** shows leads with a collected number.
- **AI failed** shows conversations that need review.
- **Active only** shows conversations still moving.
- **Viewings** shows viewing-related conversations.

OPEN A CONVERSATION

Two easy options

Choose the thread number, or open the three-dot menu and select **Open thread**.

The page refreshes automatically as new saved messages become available.

Conversation actions

ACTION	WHAT IT DOES	WHEN TO USE IT
Open property	Opens the original listing.	When you need to check property details.
Copy phone	Copies the landlord's extracted number.	When the number needs to be shared or contacted.
Complete	Marks the conversation complete.	When no more automated action is required.
Invalid	Marks the lead as unsuitable.	Only after confirming the lead should not continue.

Important: only mark a conversation Complete or Invalid when you are sure the system should stop working on it.

Adding an account

Each account represents one OpenRent login. Click **Add Account** at the top of the Accounts page to open the setup form.

The Add Account form — fill in each field, then click **Create**.

- 1 Email & Password**
 Enter the OpenRent account email address and its password.
- 2 Session file**
 Leave blank to auto-generate, or enter a name such as **session1**, **session2**, **session3**, and so on.
- 3 Select a proxy**
 Open the Proxy dropdown and choose one that is not already in use. If all proxies are assigned, reusing one is acceptable.
- 4 Message strategy**
 Choose the messaging approach this account will use when contacting landlords.
- 5 Phone strategy**
 Select how the account will request phone numbers from landlords.
- 6 Conversation style**
 Choose the tone and style for automated replies, then click **Create**.

Need a new Outlook account? Click the **Create Outlook Account** button at the top-right of the Accounts page to register a brand-new email account directly from the system — no external setup required.

Starting the worker for the first time: After saving a new account, go to the Accounts page and use the **Start worker** action from the three-dot (...) menu on that account row. Once started manually the first time, the worker will run automatically and re-queue itself — no further manual action is needed.

Managing accounts

The Accounts page gives you a full view of every account — its status, daily usage, assigned proxy, and worker controls.

The Accounts page. Use the ... three-dot menu on any row to edit the account, test its proxy, start a worker, or manage the session.

Common account controls

CONTROL	WHAT IT DOES
Edit account	Update credentials, proxy assignment, strategy, or conversation style.
Start worker	Immediately start an automation run for this account.
Pause account	Stop the account from running until it is manually resumed.
Test proxy	Check that the account can connect through its assigned proxy.
Refresh session	Ask the system to renew the saved login session.

Use with care: Invalidate Session forces the account to re-authenticate. Delete Account permanently removes the account and all its data. Ask your administrator before using either action.

Search profiles

Search profiles define exactly what each account looks for on OpenRent — the account, location, radius, price range, and bedroom count.

Account	Location	Radius	Price range	Bedrooms	Pets	Active
citylights2027@outlook.com	Birmingham, West Midlands	15 mi	£1,000 – £5,000	1–3	No	☒
breezeup2026@outlook.com	Leicester, Leicestershire	20 mi	£1,000 – £5,000	1–3	No	☒
hazewind2026@outlook.com	Greater Manchester	30 mi	£1,000 – £3,000	1–5	No	☒
lookscity@outlook.com	Leeds, West Yorkshire	15 mi	£1,000 – £5,000	1–5	No	☒

The Search Profiles page — shows every account's assigned location, search radius, price range, and bedroom criteria.

ADDING A PROFILE

Click Add Profile to get started

1. Select the **account** from the dropdown.
2. Select the **location** to search.
3. Enter the search **radius** in miles.
4. Set **price min** and **price max**.
5. Set **bedrooms min** and **bedrooms max**.
6. Toggle **Pets allowed** only when required, then click **Create**.

The Add Profile form.

Good setup check: the account is active, its proxy test passes, and it has at least one active search profile with a valid location.

Locations

Locations are the areas you want the system to search. Each search profile needs at least one active location assigned to it.

The Locations page — lists every location with its display name and the exact OpenRent search term used.

ADDING A LOCATION

Click Add Location to get started

1. Enter a clear **display name** (e.g. Birmingham).
2. Enter the exact **OpenRent term** (e.g. Birmingham, West Midlands).
3. Keep the **Active** toggle on.
4. Click **Create**.

The OpenRent term is the value that gets submitted directly to OpenRent's location search field — make sure it matches exactly.

The 'Add location' form is shown with a close button (X) in the top right. It contains the following fields: 'Name' (with placeholder 'e.g. Manchester'), 'OpenRent term value' (with placeholder 'e.g. Manchester'), and a note 'Exact value submitted to OpenRent's location search field.' Below these is an 'Active' toggle switch set to 'on'. At the bottom are 'Cancel' and 'Create' buttons.

The Add Location form.

PROXIES REMINDER

What you need to know

- ✓ Every active account should have a healthy assigned proxy.
- ✓ Use **Test proxy** from the Accounts page.
- ✓ Do not disable a proxy used by an active account.
- ✓ Reassign accounts before deleting a proxy.

Workers, warnings, and failed accounts

Workers are the background processes that operate each account. You normally only need this page when a warning appears.

Worker controls — Go to the **Workers** section in the left menu to **Start / Resume, Pause, Stop,** or **Refresh** any worker. All actions are available there.

Worker status guide

- Running**
The account is being processed now.
- Completed**
The latest run finished successfully.

- Queued**
Waiting for an available worker slot.
- Retrying**
The system will try again automatically.

- Idle / Stopped**
Not currently running.
- Paused**
Will not run until resumed.

- Login / Proxy error**
Check account access or proxy health.
- Error**
Review the last error and Logs.

Failed Accounts

An account appears here after two consecutive days of outreach without landlord replies.

ACTION	USE IT WHEN
Retry	You have checked the account, session, and proxy and want another attempt.
Clear	You have reviewed the warning and want to remove the failed label.
Disable	The account should stop all future activity.

Before retrying: check session status, proxy health, the worker's last error, and recent login/error logs.

Simple troubleshooting

Use this page as a quick checklist. If the same problem returns, contact your administrator.

Backend unavailable

1. Open **Settings**.
2. Select **Test API**.
3. If it remains unavailable, contact support.

Login error

1. Confirm the account credentials.
2. Choose **Refresh session**.
3. Review Login logs if it fails again.

Proxy error

1. Choose **Test proxy**.
2. Confirm the proxy is active.
3. Reassign a healthy proxy if needed.

Worker not running

1. Confirm the account is not paused.
2. Check the proxy and worker capacity.
3. Start the worker and review Logs.

Missing a recent conversation message? Wait for the account worker to process the OpenRent inbox. Once saved, the conversation page refreshes automatically in around 10 seconds.

Settings are administrator controls

The Settings page changes global behavior for all accounts, including auto-send, AI model, delays, retries, worker capacity, and daily limits.

Do not change global settings without approval. A small change can affect every account and conversation.

When contacting support, include:

- ✓ The account email or conversation thread number.
- ✓ The page where the issue appeared.
- ✓ The status or error message shown.
- ✓ What action you tried immediately before the issue.
