CLIENT HANDBOOK

Command Center User Guide

A simple guide to monitoring activity, reviewing conversations, and keeping your property outreach running smoothly.

Prepared for everyday users • No technical knowledge required

WELCOME

Start here

The Command Center gives you one place to see what the system is doing, review landlord conversations, and spot anything that needs attention.

1

Check progress

See replies, phone numbers, active conversations, and today's activity.

2

Review conversations

Open any lead to read the conversation and see key property details.

3

Handle warnings

Use clear status labels to find accounts or workers that need attention.

Your normal daily routine is simple: check the Dashboard, review new Leads, then look at Failed Accounts or Workers only if you see a warning.

What is inside this handbook?

01	Your daily routine	Page 3
02	Understanding the Dashboard	Page 4
03	Reviewing leads and conversations	Page 5
04	Accounts and search setup	Pages 6–7
05	Warnings, workers, and troubleshooting	Pages 8–9

Before making changes: if you are unsure about a setting, account, proxy, or worker action, contact your administrator first.

EVERYDAY USE

Your daily routine

Most days, you only need three sections: Dashboard, Leads, and Failed Accounts.

Using the menu

Desktop: choose a section from the menu on the left. **Mobile:** tap the menu button in the top-left, then choose a page.

AT A GLANCE

Understanding the Dashboard

The Dashboard is your overview. It answers: "Is everything working, and what needs my attention?"

Reply rate

How many contacted landlords have replied.

Phone progress

Phone numbers collected against today's target.

Active accounts

Accounts ready to run or currently working.

Active chats

Conversations still moving forward.

Needs attention

Conversations that may need review.

Failed accounts

Accounts that should be checked before continuing.

Status colors

 **Green means healthy**
Running normally or completed successfully.

 **Red means action needed**
Login, proxy, worker, or AI error.

 **Amber means check soon**
Queued, paused, retrying, or waiting.

 **Grey means inactive**
Idle, stopped, or not currently running.

See a red warning? Open the related item first. If the cause is not clear, check Workers and Logs before changing any settings.

Recent activity

Use the filters above Recent Activity to quickly show:

Needs attention

Chats with a failure or problem.

Active

Conversations still in progress.

With phones

Leads where a number was collected.

Reviewing leads and conversations

The Leads page is where you review landlord conversations, phone numbers, properties, and viewings.

FIND THE RIGHT LEAD

Useful filters

- **Has phone** shows leads with a collected number.
- **AI failed** shows conversations that need review.
- **Active only** shows conversations still moving.
- **Viewings** shows viewing-related conversations.

OPEN A CONVERSATION

Two easy options

Choose the thread number, or open the three-dot menu and select **Open thread**.

The page refreshes automatically as new saved messages become available.

LANDLORD

Yes, the property is still available. Would Tuesday evening work?

YOUR ACCOUNT

Tuesday evening works well, thank you. Could you please confirm the time?

LANDLORD

6:30pm is fine. You can reach me on 07400 000000.

Landlord messages appear on the left. Successfully sent account messages appear on the right.

Conversation actions

ACTION	WHAT IT DOES	WHEN TO USE IT
Open property	Opens the original listing.	When you need to check property details.
Copy phone	Copies the landlord's extracted number.	When the number needs to be shared or contacted.
Complete	Marks the conversation complete.	When no more automated action is required.
Invalid	Marks the lead as unsuitable.	Only after confirming the lead should not continue.

Important: only mark a conversation Complete or Invalid when you are sure the system should stop working on it.

Accounts made simple

Each account represents one OpenRent login. The account page shows whether it is healthy, how much it has sent today, and whether it is ready to work.

Session status

Shows whether the OpenRent login is working.

Worker status

Shows whether automation is running, waiting, or stopped.

Daily usage

Shows messages sent against the account's daily limit.

Adding an account

1

Select Add Account

Enter the OpenRent email and password.

2

Assign an active proxy

Choose the proxy prepared for this account.

3

Choose limits and style

Set the daily limit, phone strategy, and conversation style.

4

Add the initial message

This is the first message landlords receive.

5

Create and test

Save the account, test its proxy, then refresh its session.

6

Start or resume

Enable the account only after setup is complete.

Common account controls

CONTROL	PLAIN-LANGUAGE MEANING
Start worker	Start an automation run now.
Pause account	Prevent the account from running until resumed.
Test proxy	Check that the account can connect through its assigned proxy.
Refresh session	Ask the system to refresh the saved login session.

Use with care: Invalidate Session forces the account to authenticate again. Delete Account permanently removes the account and related data. Ask an administrator before using either action.

How property searches are configured

Three items work together: a proxy keeps the account connection separate, a location defines where to search, and a search profile defines what to look for.

LOCATIONS

Add the areas you want

1. Select **Add Location**.
2. Enter a clear display name.
3. Enter the exact OpenRent search term.
4. Keep the location active and save.

SEARCH PROFILES

Define what each account searches

1. Choose an account and location.
2. Enter the search radius.
3. Set price and bedroom ranges.
4. Enable pets only when required.

PROXIES

What you need to know

- ✓ Every active account should have a healthy assigned proxy.
- ✓ Use **Test proxy** from the Accounts page.
- ✓ Do not disable a proxy used by an active account.
- ✓ Reassign accounts before deleting a proxy.

Good setup check: the account is active, its proxy test passes, and it has at least one active search profile.

Workers, warnings, and failed accounts

Workers are the background processes that operate each account. You normally only need this page when a warning appears.

Worker status guide

● **Running**

The account is being processed now.

● **Completed**

The latest run finished successfully.

● **Queued**

Waiting for an available worker slot.

● **Retrying**

The system will try again automatically.

● **Idle / Stopped**

Not currently running.

● **Paused**

Will not run until resumed.

● **Login / Proxy error**

Check account access or proxy health.

● **Error**

Review the last error and Logs.

Failed Accounts

An account appears here after two consecutive days of outreach without landlord replies.

ACTION	USE IT WHEN
Retry	You have checked the account, session, and proxy and want another attempt.
Clear	You have reviewed the warning and want to remove the failed label.
Disable	The account should stop all future activity.

Before retrying: check session status, proxy health, the worker's last error, and recent login/error logs.

Simple troubleshooting

Use this page as a quick checklist. If the same problem returns, contact your administrator.

Backend unavailable

1. Open **Settings**.
2. Select **Test API**.
3. If it remains unavailable, contact support.

Login error

1. Confirm the account credentials.
2. Choose **Refresh session**.
3. Review Login logs if it fails again.

Proxy error

1. Choose **Test proxy**.
2. Confirm the proxy is active.
3. Reassign a healthy proxy if needed.

Worker not running

1. Confirm the account is not paused.
2. Check the proxy and worker capacity.
3. Start the worker and review Logs.

Missing a recent conversation message? Wait for the account worker to process the OpenRent inbox. Once saved, the conversation page refreshes automatically in around 10 seconds.

Settings are administrator controls

The Settings page changes global behavior for all accounts, including auto-send, AI model, delays, retries, worker capacity, and daily limits.

Do not change global settings without approval. A small change can affect every account and conversation.

When contacting support, include:

- ✓ The account email or conversation thread number.
- ✓ The page where the issue appeared.
- ✓ The status or error message shown.
- ✓ What action you tried immediately before the issue.
